$ npm

Usage: npm <command>

where <command> is one of:
    access, adduser, audit, bin, bugs, c, cache, ci, cit,
    clean-install, clean-install-test, completion, config,
    create, ddp, dedupe, deprecate, dist-tag, docs, doctor,
    edit, explore, fund, get, help, help-search, hook, i, init,
    install, install-ci-test, install-test, it, link, list, ln,
    login, logout, ls, org, outdated, owner, pack, ping, prefix,
    profile, prune, publish, rb, rebuild, repo, restart, root,
    run, run-script, s, se, search, set, shrinkwrap, star,
    stars, start, stop, t, team, test, token, tst, un,
    uninstall, unpublish, unstar, up, update, v, version, view,
    whoami

npm <command> -h  quick help on <command>
npm -l            display full usage info
npm help <term>   search for help on <term>
npm help npm      involved overview

Specify configs in the ini-formatted file:
    C:\Users\Omkar\.npmrc
or on the command line via: npm <command> --key value
Config info can be viewed via: npm help config

npm@6.14.5 C:\Program Files\nodejs\node_modules\npm

$ git
usage: git [--version] [--help] [-C <path>] [-c <name>=<value>]
           [--exec-path[=<path>]] [--html-path] [--man-path] [--info-path]
           [-p | --paginate | -P | --no-pager] [--no-replace-objects] [--bare]
           [--git-dir=<path>] [--work-tree=<path>] [--namespace=<name>]
           <command> [<args>]

These are common Git commands used in various situations:

start a working area (see also: git help tutorial)
   clone             Clone a repository into a new directory
   init              Create an empty Git repository or reinitialize an existing one

work on the current change (see also: git help everyday)
   add               Add file contents to the index
   mv                Move or rename a file, a directory, or a symlink
   restore           Restore working tree files
   rm                Remove files from the working tree and from the index
   sparse-checkout   Initialize and modify the sparse-checkout

examine the history and state (see also: git help revisions)
   bisect            Use binary search to find the commit that introduced a bug
   diff              Show changes between commits, commit and working tree, etc
   grep              Print lines matching a pattern
   log               Show commit logs
   show              Show various types of objects
   status            Show the working tree status

grow, mark and tweak your common history
   branch            List, create, or delete branches
   commit            Record changes to the repository
   merge             Join two or more development histories together
   rebase            Reapply commits on top of another base tip
   reset             Reset current HEAD to the specified state
   switch            Switch branches
   tag               Create, list, delete or verify a tag object signed with GPG

collaborate (see also: git help workflows)
   fetch             Download objects and refs from another repository
   pull              Fetch from and integrate with another repository or a local branch
   push              Update remote refs along with associated objects

'git help -a' and 'git help -g' list available subcommands and some
concept guides. See 'git help <command>' or 'git help <concept>'
to read about a specific subcommand or concept.
See 'git help git' for an overview of the system.

```
MINGW64:/c/Users/Omkar/Documents/GitHub/WDL-2020                              —    □    ✕

Omkar@Omkar MINGW64 ~/Documents/GitHub/WDL-2020 (Omkar)
$ browser-sync
Commands:
  start   Start the server
  init    Create a configuration file
  reload  Send a reload event over HTTP protocol
  recipe  Generate the files for a recipe

Options:
  --version  Show version number                                  [boolean]

For help running a certain command, type <command> --help
  ..\..\..\AppData\Roaming\npm\node_modules\browser-sync\dist\bin.js start
  --help

You can run a static server by providing a path(s) directly
  ..\..\..\AppData\Roaming\npm\node_modules\browser-sync\dist\bin.js app/src
  app/tmp

If the directory contains a 'index.html' file, you can omit any input
  ..\..\..\AppData\Roaming\npm\node_modules\browser-sync\dist\bin.js

You can run the proxy in this manner too
  ..\..\..\AppData\Roaming\npm\node_modules\browser-sync\dist\bin.js
  https://example.com

To run a proxy, whilst also serving static files
  ..\..\..\AppData\Roaming\npm\node_modules\browser-sync\dist\bin.js
  https://example.com htdocs/themes/example
